News Desk

Dragon slips a disc

TWO companies seem likely to produce disc systems for the Dragon 32 microcomputer in March — ahead of the official Dragon Data unit.

Premier Microsystems and Compusense both have disc systems ready for launch, the two products designed for markedly different applications.

Due out first, the Premier system is considerably cheaper. The disc interface, containing the disc operating system in Rom, supplied with instruction manual, is priced at £99.95 including VAT.

The system will run with most 5¼-inch, 3-inch or 8-inch disc drives — single density, single- or double-sided, 40- or 80-tracks. Up to four drives can be controlled at any time. Premier Microsystems will at first be offering a package of the disc interface and operating system plus a single 100K 40-track 5¼-inch Canon drive for less than £300 including VAT. A twin disc system will be priced around £500.

Spectrum sales top 200,000

SINCLAIR Research has sold more than 200,000 Spectrum computers in the nine months since the machine was launched.

Resulting from this success the company has announced more retail outlets for the Spectrum — it is now available in selected branches of Boots, Currys, Greens and John Menzies. The distribution organisation, Prism Micropro-

ducts, will also be supplying John Lewis, House of Fraser and Xerox stores.

"By Easter we expect to be selling between 12,000 and 15,000 Spectrums per week in the UK," said Current Products Division Managing Director, Nigel Searle.

Current monthly production of the Spectrum exceeds 50,000 units.

See us at the ZX Microfair!

If you own a ZX81 or SPECTRUM — or if you're thinking of buying for the first time — **the ZX MICROFAIR is not to be missed!**

There's literally everything for the beginner, amateur, enthusiast and professional.

A fantastic range of products from both the established manufacturers and the newer ones!

There's a bring and buy sale and a complete show guide available on the day.

It's a good day out and the opportunity of learning everything there is to know about ZX Computers.

The facilities at the hall include Bar, Restaurant and lots of seating!

Make a note of it now, or write to Mike Johnston, 71 Park Lane, London N17 0HG for advance tickets (Cheques etc made payable to ZX MICROFAIR and please enclose S.A.E.)

At 80p for adults and 50p for kids (under 14) it must be a bargain!

How to submit articles

Articles which are submitted for publication
should not be more than 3,000 words long. The
articles, and any accompanying programs,
should be original. It is breaking the law of
copyright to copy programs out of other maga-
zines and submit them here — so please do not
be tempted.

All submissions should be typed and a double
space should be left between each line. Please
leave wide margins.

Programs should, whenever possible, be
computer printed.

We cannot guarantee to return every submit-
ted article or program, so please keep a copy. If
you want to have your program returned you
must include a stamped, addressed envelope.

Accuracy

Popular Computing Weekly cannot accept any
responsibility for any errors in programs we
publish, although we will always try our best to
make sure programs work.

Editorial

The question of software libraries has
been causing increasing concern
among software houses, retailers and
buyers in recent weeks.

Following our latest article on soft-
ware libraries and copyright (*Popular
Computing Weekly*, February 3-9), we
have received a large number of
letters arguing the case both for and
against such libraries. We have also
discovered a software library that has
been hiring out cassettes against the
wishes of the original publisher.

In an attempt to lay down some sort
of guidelines, we have decided to
accept advertisements only from
those software libraries which use
cassettes with the permission of the
publishers. Software libraries which
hire out cassettes without permission
will not be allowed to advertise in
Popular Computing Weekly.

We are taking this stand because
we believe software libraries are an
issue that needs to be tackled now.
Hiring cassettes without the permis-
sion of the publishers may or may not
be illegal — it is certainly hard to
justify.

This is not to tar all software librar-
ies with the same brush. A number of
software libraries do obtain permis-
sion from, and negotiate royalties with,
the companies whose cassettes they
hire out. We have no quarrel with such
organisations, we just wish all libraries
operated on similar lines.

THE DRAGON DUNGEON

**DRAGON'S
TEETH**

The Dragon Dungeon Club monthly newsletter is packed with news, reviews and information for the dedicated Dragon-basher. The Dungeon Master has discarded his scrolls and is busily hammering your letters and tips into his new word-processor. He will continue to need your tips, discoveries, reviews and "beefs" and will send out guidelines and payment rates to those of you who feel up to full-scale articles.

In the light of constant enquiries as to where local advice can be obtained, The Dragon would like to hear from any Dragon enthusiasts, who have set up formal or informal groups.

The March Issue of *Dragon's Teeth*, due out late February, will include both hardware and software offers and Club Members registering before 31st March will be eligible to purchase Dragon badges and sweatshirt at very special prices.

Annual membership, including *Dragon's Teeth*, £6 (six-month trial subscription £3.25).

**DRAGON
STICKS!**

Top quality joysticks, for
the Dragon owner who
demands arcade action
Ultra-sensitive, but tough
and reliable, Dragon
Sticks will keep on
zapping when others fail!
£19.95 per pair
inclusive VAT and postage.

The Dungeon vaults are filled with peripherals, software, books and other goodies exclusively for the Dragon 32 owner — from cassette recorder leads, custom-made dust covers and Hi-Res Planning Pads to T-shirts, stickers and badges.

Our stock of software is selective, rather than extensive, since we believe in value for money. Feed your Dragon on the best programs!

Utilities, including Editor/Assembler, coming into stock shortly and two new Dragon books. Current best-seller: *The Working Dragon 32*, £5.95.

Send for the current "Take Inventory" listing.

PO BOX 4, ASHBOURNE, DERBYSHIRE DE6 1AQ. TEL: ASHBOURNE 44626

Dragon discs

Continued from page 1

"The software in the disc operating system will appear to the user as an extension of the Dragon's Basic," explained Premier partner Peter Rihan. This will give new commands — *Save*, *Load*, *Save M* and *Load M* (for machine code), *Create filename*, and *Assign old-filename/new-filename*. When saving, the system will automatically re-create the file if necessary.

The Compusense Dragon disc system is more ambitious and, correspondingly, more expensive. For between £500 and £600, Compusense is offering a twin single-sided double-density 40-track 400K system together with disc interface and operating system. The disc interface incorporates

an additional 64K Ram and an RS232 interface.

Compusense is also recommending that the system be used in conjunction with a 24 x 80 display intelligent terminal, which will cost in the region of £400. Says director Ted Opyrchal "To run any useful business programs you need a degree of expandability — 64K — full RS232 protocol and a proper display. Using the Flex operating system in our interface and a 24 x 80 terminal gives access to a whole range of 6809 software packages." Software available under Flex includes *Dynacalc*, *Database Manager*, *Micro Assembler* and the languages *Cobol*, *Pascal* and *C*.

"Our thousand-pound Dragon then begins to look like a system costing three times that amount," he said.

Creative software says 'die'

PAUL ZUZELO flew in from California earlier this month to announce that his company — Creative Software — has signed an exclusive distribution and marketing deal with Audiogenic.

Creative Software, one of the leading US manufacturers of Vic20 cartridge software, is to sell its current Vic20 range and forthcoming Commodore 64 titles through the Reading-based company.

The American software producer employs a new technique in the manufacture of its cartridges. Instead of the game being in the form of a Rom 'chip' the program is held in a 'die' manufactured onto the printed-circuit board.

"This means," says Zuzelo, "we can put out a 16K die on-board for about the same cost as we can a conventional 8K Rom."

"In practice this won't mean that cartridge prices will come

down — rather you will see the quality of the game go up."

Among the Vic20 games Creative Software will be marketing through Audiogenic are some of the biggest selling US titles — *Astroblitz*, *Trashman* and *Choplifter*.

6th ZX microfair

THE SIXTH ZX Microfair will be held on Saturday, February 26, at the usual venue — New Horticultural Hall, London SW1. It will be open from 10 am to 4 pm and entry will cost 80p for adults and 50p for kids under 14.

Over 100 exhibitors will be there and new tapes should be on sale for the first time from Quicksilver, Silversoft and Carnell.

Atari sues Philips

ATARI has embarked on another legal battle over copyright in the *Pac-Man* video game — this time with Philips.

The decision to go ahead with the action against the UK arm of the Philips multinational follows a successful similar legal move against Philips in the US.

Atari's other, better known, move against Commodore is due to be heard by the English courts in March.

Micro industry group to get protection

A NEW group has been formed which aims to protect the interests of those in the microcomputer trade.

Membership of the body — called the Society of Computer Manufacturers, Agents and Dealers — is open to any company, partnership or sole trader commercially involved in the computer trade.

Acting secretary Nigel Backhurst explained that the group was set up to promote the interests of both hardware and software suppliers, big or small. Members so far include Atari, Bug-Byte, Buffer Micro Shop, Computers and Tandy. Backhurst is actively campaigning for other companies to join the group.

The society will hold its first

meeting on Saturday, March 5, at the 6th Form Centre, King Edward VII College, Warren Hills, Coalville, Leicestershire (3 miles from the M1 A50 junction). The meeting will begin at 11 am.

Among resolutions to be considered is one which urges that the society be "concerned about the activities of software libraries, [and] should take action on behalf of its members against them."

Any individual in the computer trade is welcome to attend this first open General Meeting.

More details from Nigel Backhurst, 108 Margaret Street, Coalville, Leicestershire (tel: 0530 33566).

US competition for Spectrum

THE vicious price war faced by Sinclair in the US takes another turn as Texas Instruments cuts a further £31 off the cost of its TI99/4A computer.

This will bring down its average American price, already rebated by the manufacturer until mid-April, to £98. This figure is close to the proposed price of the American 16K Spectrum of £95.

The TI99/4A sells for £199.95 in Britain.

Trojan sees the light

FOR £10 you can now buy a light-pen for the Dragon 32.

The unit plugs into the joystick port on the computer and is addressed from the keyboard using normal joystick commands.

The light-pen is produced by Trojan Products and comes complete with a cassette which includes full instructions and several demonstration programs showing how to incorporate the input from the device in a program.

"It uses quite a fast photo-transistor so it will be possible to use it in machine-code games."

"No specialised software is required and it can be used for X-Y plotting or data entry as

TI's rival to the Spectrum

TEXAS Instruments' rival for the ZX81 — the TI99/2 (see *Popular Computing Weekly* Vol 12, No 4).

The machine, which will sell for between £70 and £80, has the advantages of 4K Ram as standard, plug-in Rom cartridge port and the range of inexpensive peripherals shown. The three add-on units shown in the stack are (top to bottom): HX-1000 four-colour printer/plotter, HX-2000 Wafer-tape high-speed micro tape drive unit and HX-3000 RS232 interface. The modules connect to the TI99/2 via a Hexbus interface connector at the rear of the machine.

well as in games. It can offer a much faster alternative to the keyboard," says Trojan's Geoff Jones.

Details from Trojan Products, 166 Derlwyn, Dunvant, Swansea.

NEW SPECTRUM AND ZX81 SOFTWARE

"WINGED AVENGER"

Fast and furious. SPECTRUM version has SOUND and USER GRAPHICS. 7 LEVELS. 3 WAVES. MOTHER SHIP. HIGH SCORE. RE-FUELLING. RAPID FIRE. SMART BOMBS and LASER SHIELD. PCW "ONE OF THE BEST SINCLAIR GAMES YET" Only £4.50. All SPECTRUM + 16K ZX81.

"SPECTRUM SCRAMBLE"

MORE M-CODE ARCADE ACTION. "SO GOOD THE REVIEWERS DIDN'T REACH THE FINAL STAGE" (NOT BAD EH!). NO LESS THAN 8 DIRECTIONAL KEYS for a SMOOTH MOVE. Full ARCADE features including: LASERS, BOMBS, INSTANT RESPONSE, CONTINUOUS SCORING, ROCKETS, SOUND, FUEL DUMPS, RED METEORS, DEFENDER CRAFT and HIGH SCORE. SPECTRUM CONDITION RED. With this you MOVE, FIRE and BOMB AT THE SAME TIME. RELEASE PRICE of £4.95. 16K or 48K SPECTRUM.

"DO NOT PASS GO"

NOW THE 48K SPECTRUM VERSION IS READY

A COMPLETE SIMULATION of the BEST SELLING BOARD GAME, you know PARK LANE and all that. Up to SIX PLAYERS can compete with the MICRO doing all the WORK. Acts as DICE THROWER, BOARD, RENT COLLECTOR, UMPIRE, BANK, RULE BOOK, ACCOUNTANT and PROPERTY RECORD. SUPER GRAPHICS by Gary Kennedy (thanks mate). GAME SAVE with winner so far report. COMPLETE with INSTRUCTION BOOKLET. THE ULTIMATE in FAMILY GAMES. Don't MONOPOLISE YOUR MICRO. AMAZE all your friends and family. (Can you see your GRANNY on a MICRO?) ONLY £5.95. 16K ZX81 VERSION ALSO £5.95.

"BASE INVADERS"

THE ONLY ARCADE GAME EVERYBODY SHOULD HAVE. THE SCREEN'S the same, THE INVADERS are the same, BUT you get a SHIELD and a CHOICE of THREE SPEEDS. (O.K. or INCREDIBLE). GOOD SOUND, a HARD GAME, and GREAT GRAPHICS. COMPLETE your software collection for just £4.50. 16K and 48K SPECTRUM only.

"AUDIO SONICS"

WINNER of WIZZ KID 82. For the SPECTRUM. A.S. writes sound effects for your own programs. 26 PRE-SELECTED SOUND EFFECTS include TELEPHONE, POLICE SIREN, FROG, SPACE EFFECTS and OUTBOARD MOTOR. GO into MODIFY and you are presented with a display of SLIDER CONTROLS to adjust PITCH, RISE, FALL, BRISKNESS, DECCEL, ACCELL, TONE, REPEAT RATE, STUTTER and DELAY. ADJUST the SLIDERS then INSTANTLY hear the SOUND CREATED. Call "THE SOUND ONE" and a program line will appear that is ready for insertion into your own programs. Hours of EXPLORATION. YOU WILL BE AMAZED what BEEP can DO. We are proud to offer this at £4.99. 16K or 48K SPECTRUM.

"SPECTRUM RENUMBER DELETE"

All M-CODE RENUMBERS ALL NOT PART. "YOU WON'T BUY A BETTER RENUMBER PROGRAM FOR THE SPECTRUM" JUST 600 BYTES. At £4.95. ALSO ZX81 VERSION.

"HIGH NOON"

When YOU'VE SAVED the GALAXY, SCRAMBLED or whatever else you do on your MICRO, what about a GUNFIGHT? Play the SPECTRUM or YOUR PAL'S. THREE LEVELS. FULL FEATURES. CACTI. COFFINS. WAGONS. RAPID or SINGLE SHOTS. SUPERB GRAPHICS. GOOD SOUND including DEATH MARCH. ESCAPISM on TAPE for JUST £4.50.

"DISPLAY"

Takes over when BIN and the DEMO tape left off. How would you like 273 different user defined GRAPHICS on a 16K SPECTRUM or a GRAND 336 for a 48K. All of these can be displayed on the screen at the SAME TIME. UDGs are stored as PAGES and any TWO PAGES may be exchanged in memory. FILES can be LOADED FROM or SAVED TO TAPE. LOAD into any page location. TURN a UDG 1/4 turn, 1/2 turn, FLIP a SHAPE over, REVERSE a SHAPE, EXPAND 1/4 of a CHARACTER into a full character, UP, DOWN, LEFT or RIGHT by one PIXEL. 5 SHAPE FILES are included on TAPE. INCLUDING 4 CHARACTERS per line DISPLAY. COMPLETE with DEMO PROGRAM and INSTRUCTIONS. JUST RELEASED at £7.00. 48K or 16K SPECTRUM only.

"TraceON"

BASED on a FILM (GUESS WHICH). TraceON is a REAL TIME ADVENTURE for those of you who can't handle ARCADE GAMES. Your TASK is to COMPLETE a TRILOGY of GAMES successfully. A poor PERFORMANCE will result in a RESTART as may CHEATING. MASTER the DISKS and YOU get to ride a LIGHT BIKE and then RUN the CORRIDORS of DEATH to reach the MASTER CONTROL. REALLY GOOD FRUSTRATING FUN. 48K SPECTRUM £4.50 (16K coming soon.)

"MATCALC"

For BUSINESS and PROFESSIONAL use. Ideal for WHAT IF situations. CASH FLOW FOREC. STS and analysing RELATED figures. 64 character display option. FORMULA may be MATHEMATICAL or LOGICAL. MENU of FUNCTIONS. SAVE and LOAD DATA to TAPE. FULL instructions included. LITERALLY HUNDREDS of USES. BOTH 48K and 16K SPECTRUM PROGRAMS on ONE TAPE. JUST £7.00. EXCELLENT VALUE.

"PROGRAMMERS DREAM"

A SPECTRUM TOOLKIT. Position independent and just 1450 BYTES. Facilities RENUMBER lines or blocks any increment or start. BLOCK OR LINE MOVE including a RENUMBER into place if required. BLOCK OR LINE ERASE, CHANGE SELECTED, STRINGS (NAMES OR CONTENTS). DUMP variable names and values (usable in a loop). DISPLAY PROGRAM or PROGRAM plus VARIABLE SIZE. INSTANT and CLEAN. JUST £5.95 with explicit instructions.

Micro software association

The proposal made in your letters column (December 30), to form a British Micro Software Authors' Association, is one that every software writer should take very seriously indeed.

Apart from matters of copyright, such a body may well be able to offer advice to new writers on how to deal with established software houses, how to prepare programs for publication in magazines (perhaps offering editors some welcome relief in the process), and possibly also reviewing and offering constructive criticism of software. In addition, it could advise on the sort of price, packaging and marketing method that might be appropriate to individual programs. The experience gained by individuals in these matters could thus be pooled and made available to others whose main interest, after all, is likely to be in writing programs rather than the process of selling them.

I would be most interested to hear from any software writers who may be interested in co-operating to form such an association (an SAE would be greatly appreciated).

Nick Godwin
4 Hurler Crescent
Eyemouth
Berwickshire
Scotland

Taking issue with a smear

With regard to the software library issue, please do not tar all software libraries with the same brush. The *Monster Software Club* is probably one of the latest software libraries to advertise in your magazine. No, not just another library jumping on the bandwagon, the latest only because I have first gained permission to use the tapes that I list. I now list software for the Dragon from six producers — all tapes are used with the producers' permission and with royalties being paid.

A "legally" run library offers the following: for the members — access to a full library of software at a relatively small cost. For the software houses — we supply a ready made market for its soft-

ware (I am after all purchasing software) plus royalties.

One of your correspondents (*Popular Computing Weekly*, February 3-9) suggests that you withhold any advertisements from software lending libraries. Perhaps he can tell me why I should be stopped from advertising?

In your view you stated: "Each cassette should display a message, in a prominent position on the outside, stating that it is a condition of sale that the cassette will not be hired or lent". I agree with this if the words "without permission" are added. But, if this does stop illegal lending, what about the Exchange Clubs and software banks?

A. Robinson
Monster Software Club
32 Lennox Drive
Lupset Park
Wakefield
West Yorkshire

Mr Robinson is quite correct in the points he makes in his letter. We have no quarrel with software libraries which obtain permission from, and pay royalties to, the software houses whose tapes they hire out. Unfortunately, not all software houses are as scrupulous as the *Monster Software Club*.

Co-ordinating action

While applauding your offer to co-ordinate the formation of the much-needed trade association of software houses, I would suggest that the primary answer to unauthorised hiring of programs lies in the *Sale of Goods Act 1979*. This clearly states that any contract of sale may be absolute or conditional.

Provided that the software supplier highlights the fact that the sale is "conditional" on his invoice (including in the terms a requirement for further payments, such as royalties in the event of hiring out to third parties), then the contract remains open-ended. Such a caveat, while not preventing the hiring of software purchased, would at least ensure that royalties would be claimable.

I can imagine that some of your readers will feel that all this "aggro" over tape libraries is a "spoil-sport" attitude on the part of the trade. To

such readers, I would point out that if they want a regular supply of new programs then they should bear in mind the example of the book trade.

The problem with *The Sale of Goods Act 1979* was highlighted by Gail Counsell in *Popular Computing Weekly*, February 3-9. While the contract of sale may indeed be either absolute or conditional, it does not "bind third parties". Thus the person who buys a tape direct from a software supplier can be bound by the contract, but if he subsequently sells the tape to a third party, that person will not be bound by the contract.

Then where's the fault?

I have been reading your magazine for a couple of months now and recently bought a Spectrum. I dug out my old books and tried *Under Pressure*. However, I did not work. I checked it through, but in the end I pulled the plug on it.

Now I have typed in *Missile Command* and checked it through four times, but it just keeps saying *B Integer out of range, 95,3*. Line 95 though is perfectly correct and so are all the others.

I suggest that you try out this program yourself and send me the correct version of it or I will stop buying your magazine. I only get it for the programs.

David Jackson
7 Theydon Gardens

Essex RM13 7TU

I tried both programs before they were printed and I can assure you they do work. The listings were taken from cassettes of the programs after they had been tested, so we know they are correct. Enough people have also contacted us and said how much they enjoyed playing the games for us to be confident that the programs were printed correctly.

We do not claim to be infallible, but we take a great deal of trouble to try and ensure that the programs are printed accurately.

Dragon lovers

The following information may be of use to fellow Dragon lovers. The *Peeks* for the arrow keys are, Left (343), Right (344), Up (341), Down (342). A value of 223 is returned for pressed and @ 255 not pressed. Using *If Peek* (341) = 223 etc allows repeat keys for movement within games for those without joysticks and is much faster than the cumbersome *Inkey\$* routine.

The start and end pointers for Basic are located at *Peeks* 25 to 28 and allow the loading of more than one program from tape. *Peek* 25 and 26 gives the start pointer — normal values are 30 and 1. Multiplying the first value by 256 and adding the second gives a decimal location of 7681 (default position with four pages of graphics reserved). *Peek* 27 and 28 gives the location two bytes to the right of the end pointer. To load multiple programs from tape use the method in the example, although your actual values will depend on the length of the programs:

Example:
1. Load program A
2. Print peek (25):peek(26):peek(27):peek(28)
Sample values: 30 1 42 138
3. Poke 25,42:Poke 26,138 rem 138-2
4. Load program B
5. Remun so that start line is higher than the highest line number in program A
6. Poke 25,30: poke 26,1 rem original values

You should now be able to list both programs. Using this procedure repeatedly, I successfully combined six shortish games with a selection routine to enable my son to play any of the games without reloading. Care must be taken with variables of course, but a return to the selection routine and a *Clear* statement takes care of this.

Acknowledgements are due to E O Gilligan Jnr of Birmingham, AL 35226 USA for this pointer. The information was gleaned from his article on the Tandy Color Computer in the US magazine *80MICRO* November 1982.

Dragon's Lair

A new game for the Dragon 32 by Ian Mercer

The object of this game is to guide a magic cube through a series of inter-connecting passages vaporising the dragons sleeping in their lairs, while attaining as low a score as possible.

You use the cursor keys to guide the magic cube (positioned in the top right-hand corner of the screen at the start) through the passages which contain four dragons (inverse "D"s) that rest on the various levels.

The floors and ceiling of the passages are lined with rocks which should be avoided. Collision with the rocks will add to your score and cause the cube to bounce off in a random fashion. Pressing a key will also add to your score.

In the harder levels, the path to the next passage is sometimes blocked. Pressing "D" in such cases will dig a hole directly below you, but use this with care because it adds 10 to your score. When all the dragons are vaporised they will be replaced ready for the next player.

Program notes

Line(s)	
30 to 100	Set variables
120	Print dragons
150	Goto subroutine to increase x and y according to inkey\$
180 to 240	Check if something is hit and if so make a random bounce
250 to 300	Keyboard scan routine
310 to 470	Print score card
480 to 510	Subroutine to alter values of x and y
520 to 670	Print display

Gradgrind grows from Greenock

Boris Allan reviews the new European version of IBM's Personal Computer.

IBM has been very successful with its PC in the USA, partly because of the IBM user and dealer support. Unfortunately, if you buy a special import IBM PC from an unrecognised dealer, there will be no IBM-approved service back-up or advice.

The minimum configuration for the IBM PC in Britain is superior to the USA minimum, and so importers may not be even selling an equal configuration. The only way to get IBM Warranty is to purchase from an IBM Authorised Dealer, who will provide service and warranty back-up.

The machine I reviewed was provided by an IBM Authorised Dealer, the Byte Shop Ltd of Manchester (061-236 4737). The configuration was 40K Rom, 128K Ram, two 320K discs, keyboard, monochrome display, printer adapter, and printer, and is about £3,400. The absolute minimum system consists of 40K Rom, 64K Ram, a 160K disc, keyboard, monochrome display, and printer adapter, at about £2000.

The PC is being promoted as a friendly machine, and, from the promotional literature, is not aimed solely at the business or larger user. The leaflet aimed at those in research and education quotes Pasteur ("In the field of observation, chance favours the prepared mind" — though how

IBM's factory in Greenock where the new Personal Computer will be manufactured.

do you prepare it?).

IBM claims that the PC can be used as a teaching aid, used in the teaching of computer science (with the wide variety of compilers available), used as a research tool, and as a word processor to maintain

IBM is probably going to try to get the PC on the Government's list of approved suppliers to schools, and as a British manufacturer — it will be making PCs in Greenock, in all probability for the whole of Europe — it might be seen as the equivalent

The new Personal Computer's keyboard.

course notes. For the student, IBM claims that the PC has several advantages: it can provide a foundation for computer awareness, as a general learning tool, and for developing proficiency in languages such as Basic or Pascal.

lent of the Research Machines offerings.

The equivalence of the RML 3802/4802 and the IBM PC is more than at first would appear, because both these machines offer CP/M (a standard operating system) and thus have many off-the-peg programs available.

But the PC offers CP/M86 as well as ordinary CP/M, plus another operating system specially developed for the PC, called MSDOS (from Microsoft).

I approached the PC, therefore, as one who was not a businessman, was not a games-player (though there are games available, including at least two versions of Adventure), but as one who was going to use the PC in what is grandly termed education.

The Byte Shop recommended one book I did not have time to read, but glancing through, it seemed to be helpful — IBM's Personal Computer from QUE ON SYSTEMS (1982). The manuals I used were the Basic Manual (Microsoft January

Boris Allan.

Technical Specifications:

Microprocessor:	Intel 8088 (16 bit internally, 8 bit data bus at 5MHz)
Memory:	Minimum configuration is 40K Rom, 64K Ram, expandable to 0.5 megabyte
Operating System:	CP/M-86 and IBM PC DOS (ie MSDOS)
Disc Storage:	Minimum is 160K (single drive, single sided) expandable to 640K (twin drive double sided)
Keyboard:	Qwerty standard, with numeric pad, 10 user function keys and special function keys. Provides upper and lower case, and special characters.
VDU:	Green screen monitor, 25 lines of 80 characters. A special colour monitor is needed for graphics
Printer:	Dot matrix, 80cps, bidirectional, with four sizes of print
Connections:	Keyboard, audio cassette, five expansion slots for additional memory modules, displays, printers, disk drives and communications, games adapters
Sound:	Built-in speaker, user programmable
Price:	Basic system around £2000

1983) and an operating system manual. Though there are many other languages available on the PC I concentrated on Basic because, in education, Basic is rightly the most important language.

I switched on, and the system booted. I was left at the *executive* level. I then studied the Basic manual to find how to enter Basic. It was at this stage that I found I had three levels of Basic from which to choose: Basic, Disc Basic, and Advanced Basic — in ascending order of facilities — and decided to load Advanced Basic.

I loaded from the instructions given with no problems, and entered my first line. My first line did not work, because (and I could not find where in the manual it said so) keywords in the Basic had to be separated by spaces from other parts of the statement (something Sinclairs do automatically, and which most computers do not mind).

Once I had realised the error of my lines, there was no further problem, apart from my fingers' inability to obey the spaces my mind was sending (I have the same problem on the Atom).

Advanced Basic is advanced, though not so advanced as BBC Basic. It has a good selection of numerical accuracies, easily used (integer, single precision, double precision, and constants); the logical connectives are the basic six connectives, far more than are normally provided (Not, And, Or, Xor, Imp, and Eqv); and there are many graphics commands, with differing resolutions (medium at 320x200, and high at 640x200).

When we consider graphics we can compare this to the RML machines with their excellent graphics facilities, and now *Gino* Graphics. Ultimately the IBM will be able (once the software has been written) to reach even higher levels of resolution, far higher than that of the RML machines.

I think this is so because the PC can easily have more than 512K Ram, without special commands being invented. To have a high resolution picture on the screen requires each dot on the screen to be stored in memory somewhere, the larger the dots (ie the lower the resolution) the less the memory that is required to store information on the screen. The IBM, with its 16 bit Intel 8088 chip, can point to (address) far more memory than the RML, with its 8 bit Z80 chip. The RML machines can always be tricked into pointing to more memory, but the whole process slows the machine down.

The IBM's 8088 chip is not, in my opinion, a particularly good 16 bit chip, but it does make the ability to use large amounts of Ram so much easier than 8 bit chips. The IBM is, generally speaking, not much faster than good 8 bit microcomputers, but memory space is becoming more important.

To use compilers (as against interpreters), space in memory is needed. Programs of a decent size are to be run in conventional microcomputers (with a maximum of 64K), if one had 40K of Rom for

Monochrome display unit and printer.

the system (as does the IBM PC) then there would only be a maximum of 24K Ram available, unless the system is tweaked to make it appear as if more memory were available.

I found the whole environment of the PC easy to use, the keyboard was as one would expect from IBM, as were the rest of the attachments: given that IBM seems to be committed to selling the IBM to education markets (something the Sirius I has not attempted, as far as I know) and given the back-up to the machine (but only

through authorised dealers) then I can see the IBM being a strong competitor to the RML machines.

It is going to be interesting to see if some of the other 16 bit microcomputers (especially those using the Motorola 68000 series of chips) move into education, because it is where we should be moving. It is also going to be interesting to see if the BBC Tube connection to the Nat Semi 16032 becomes a viable option.

The IBM PC is an interesting machine, for all sorts of reasons.

Monochrome display, main processor unit, and keyboard.

ROMIK SOFTWARE

24 Church Street, Slough SL1 1PT. Telephone: Slough (STD 0753) 71535

SHARK ATTACK

For unexpanded Vic20
You are in shark-infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of swimming or covering your tracks for too long, if you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopuses (sometimes the sharks will eat part or all of one!).

MOONS OF JUPITER

For expanded Vic20, 30, 40 or 100
You are the Commander of a fleet of destroyers looking on from the safety of a mother ship, you send in one destroyer at a time to blast a passage through the MOONS OF JUPITER. Your destroyers have to dodge, and blast the UFOs... Watch out for the Golems they can smash your destroyers, but you cannot harm them.

A Machine Code Arcade Quality Game

SEA INVASION

Unexpanded Vic20
Fight off the attacking sea creatures for as long as you can. Shoot the whale for a surprise score, watch out for the crabs, starfish and octopuses.

MARTIAN RAIDER

For unexpanded Vic20
Skirmish as close as you dare in the surface of the planet, devastating the Martian cities, destroying ammunition dumps (taking more time), whodding down the ground-to-air missiles.

SPECIAL OFFER

C4 COMPUTER CASSETTES

£2.99 for 10, £20 for 100
Available post free from the above address only.

ROMIK PROMISE A MINIMUM OF ONE NEW GAME EVERY MONTH

MULTISOUND SYNTHESIZER

For the unexpanded Vic20
The Vic Multisound Synthesizer is very flexible and can be played in more ways than can ever be explained here: to create music and special effects. For example, create any tune up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key "9" and enjoy the added effect. Now hit "F1" listen to the difference. For a surprise — hit "F3" Now add a melody over the top — hit key "8" then "7" — now play a melody, or experiment. Have fun!

WILD TWISTERS

For unexpanded Vic20
Four games to stretch your brain. Backjack, Decipher, Four Thought and Teaser are our computerised versions of very popular home games and will test your mental agility and skill in many a long hour.

SPACE ATTACK

For the unexpanded Vic20
Space Attack is a game of skill. You as the pilot of an intergalactic battleship have to fight your way through wave after wave of various alien spacecrafts.

OPEN FORUM

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the *Program of the Week* double our new fee of £6 for each program published.

Outlander

on Spectrum

This game could be described as a combination of Moonlander and a type of Space-invaders. The game relies mostly on the speed of the player before his fuel runs out and his ship drops out of the sky. There is a second 'sheet' which is progressed to after the first has been cleared.

If the game is found to be too easy (or too difficult) the fuel could be altered as required. Sometimes, on the first go, the ship blows itself up. Just run it again and it will continue to work.

Program notes

Lines
210 to 270 Set up the first sheet.
400 to 700 Are the main loop.
410 ■ 430 Detect whether the ship has hit anything by using the ATTA command.
550 to 570 Detect what the bomb has hit.
600 and 610 Move the ship.
1000 to 1150 Are the crash routines for the ship.
2000 to 2100 Are the routines for the bomb's collisions.
2500 ■ 2620 Include the landing and score lines which decide whether to go to another sheet or stop the game.
3000 to 3030 Are the lines for the end of the game.
5000 to 5700 Set up the screen for the second sheet and include the instructions.
6000 to 6500 Are the instructions for whole game.
6900 to 8250 Are the loops @ define the characters.

ADDED THE M.H.C.-THE MEDAL FOR MERITABLE CONDUCT FOR THE DESTRUCTION OF ALL ENEMY HOUSES AND THE CO-ORDINATION OF ALL THE HOUSES.

Outlander
by Laurence Hemman

Boa-constructor

on BBC Micro

This is a deceptively simple game for the BBC Micro model A or B. The object of the game is to drive your snake around the screen eating Xs which add to your score and your snake's length. As you travel around after the Xs you must avoid the

blocks which will appear, the sides and your own tail.

The program is quite well structured, having a main loop (lines 220-290) calling all the necessary procedures. As it stands the program will run on a model B. For use on a model A make the following changes:

Line 88 32200 to 15426
Line 619, 31788 to 15484
Line 630, 31788 to 15484

The procedures are:

PROCINST ... prints instructions.
PROCSCR ... sets array values and prints screen boundaries.
PROCEX ... prints Xs and obstacles.
PROCMOV ... resets array values, takes inkey and clears input buffer.
PROCORA ... prints snake's head.
PROCUNDRA ... rubs out snake's last segment.

```

Reverse

on Dragon

Reverse

The game of Reverse is very competitive but easy to master. The idea of it is to trap the opponent's pieces between two of your own and thus gain pieces.

To make a move, enter the row then column and then enter. The program gives a running display of your and the computer's score. The computer takes a few seconds to decide its move. This program can be converted for other micros.

Program notes

19 to 80 Set up the board in array A and place the first four pieces in the middle of the board.
90 to 290 Work out the best move for the computer.
300 to 370 Enter players' moves and check them.
380 to 530 Print board and scores.
540 to 620 Check for pieces trapped by last move.
630 to 650 Print winner of game.

Horizontal Graphs

on Vic-20

This program requires a Vic printer. It asks you how many items of data you want to input and then the title of the graph, then you type in the data with separate titles for

each column. When you have finished it prints out a graph on the printer.

Program notes

Lines
21 to 70 Input all the data.
100 to 150 Work out the scale.
200 to 260 Print out the graph.

READY.

Flashy CIs

on ZX81

This machine code routine provides a very fast and spectacular CIs for the 16K ZX81. It occupies 24 bytes and is stored in a Ram statement at line 1. After the loader program has been entered run it and enter the hexadecimal codes; then delete lines 10 to 60.

The routine is called by using *Print at us* 16514,0: the reason for this is because after the machine code has been run the

Sinclair ZX Spectrum

**16K or 48K RAM...
full-size moving-
key keyboard...
colour and sound...
high-resolution
graphics...**

**From only
£125!**

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power— personal computer price!

The ZX Spectrum incorporates the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can upgrade later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. So, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer—available now—is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232/network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour—8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound—BEEP command with variable pitch and duration.
- Massive RAM—16K or 48K.
- Full-size moving-key keyboard—all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution—256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set—with upper- and lower-case characters.
- Teletext-compatible—user software can generate 40 characters per line or other settings.
- High speed LOAD ■ SAVE—16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC—incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

rum

ZX Spectrum software on cassettes – available now

The Spectrum software library is growing every day. Subjects include games, education, and business/ household management. Flight Simulation... Chess... Planetoids... History... Inventions... VU-CALC... VU-3D... Club Record Controller... there is something for everyone. And they all make full use of the Spectrum's colour, sound, and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

ZX Expansion Module

This module incorporates the three functions of Microdrive controller, local area network, and RS232 interface. Connect it to your Spectrum and you can control up to eight Microdrives, communicate with other computers, and drive a wide range of printers.

The potential is enormous, and the module will be available in the early part of 1983 for around £230.

sinclair

Sinclair Research Ltd, Stanhope Road,
Camberley, Surrey GU15 3PS.
Tel: Camberley (0276) 685311.

The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing by providing mass on-line storage.

Each Microdrive can hold up to 100K bytes using a single interchangeable storage medium.

The transfer rate is 16K bytes per second, with an average access time of 3.5 seconds. And you'll be able to connect up to 11 Microdrives to your Spectrum via the ZX Expansion Module.

A remarkable breakthrough at a remarkable price. The Microdrives will be available in the early part of 1983 for around £50.

How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Access,

Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

OPEN FORUM

Print position will still be the same as before so this resets it back to 0.0.

The program uses 24 lines but you can make it less by *Poking* 16522 with the number of lines you wish to clear. One disadvantage of this program is that it won't work after *Scroll* has been used.

If you want to clear the screen of characters that have been *Scrolled*, you should use *Print at usr 2602, usr 16514*. This calls the *Cls* subroutine in the Rom and is faster and more economical than the Basic command *Cls*.

Flashy CIs

by Mike Dipol

Allen Attack

on Vic-20

Yes, here is another space type game. The game, designed to run on a Vic plus 3K, is based on the lime-honoured practice of alien destruction. This game has, however, the dubious honour of being easy ■ start with and absurdly difficult at the end.

The scenario is quite simple. You pilot a small craft which moves from side to side along the top of the screen. The "←" key changes its direction of travel. Alien ships appear at various times at the bottom of the screen and creep upwards. If they get you in range they will destroy you, so you must bomb them before they reach you. The space bar drops the bombs. If you hit the centre of the alien, it is completely destroyed.

If you hit either side of the alien, one of two things can happen. First, the wing of the alien is destroyed, leaving a bent but still lethal foe. Or, the bomb will hit the alien's force field and explode. This will leave debris which will explode any bomb that hits it.

The more aliens you destroy, the faster they come. In order to maximise the speed of the game, no sound is used. My best score is 41 aliens, how about you?

Quality Software from BRIDGE SOFTWARE LYNCHMOS

for ZX81 with 16K RAM £4.95
for ZX Spectrum (16K) £9.50
Hangman was never like this! A competitive game of skill and strategy for 2 to 6
players. To make things fair, the computer picks turns. If you're the lucky one,
you type in a word or phrase. Then the other players guess letters. And look out if
they guess wrong, because then the lynching begins! Great fun! Educational tool!

EPHEMERIS

for ZX81 with 16K RAM £9.90
for ZX Spectrum (16K/48K) £7.90
For everyone interested in astronomy. An observer's guide to the universe
(1975-2000). Tell EPHEMERIS your position, the date and time EPHEMERIS will
tell you the position of the sun, moon and planets in the sky above you plus a
whole lot more astronomical information e.g. LST, phase, rise and set times etc,
(rise and set times only in ZX81 and 48K Spectrum versions). Results may be
printed out on ZX Printer. A triumph of programming skill!

All inclusive prices. Sent promptly by 1st class mail.
Full money-back guarantee. Send SAE for further details.

plus 50p p&p each.

DUST COVERS. Soft PVC with black piping
to protect your Dragon — £3.50 + 30p p&p.

HI-RES GRAPHICS PLAN SHEET. Map out
your Hi-res graphic display for perfect results
on your Dragon — £2.90 + 50p p&p.

SYSTEMS SAC. Foam lined nylon bag with
extra foam inserts. Strong carry handle/
shoulder strap. Transport your Dragon and
Accessories with full protection — £20 + £1
p&p.

MASTER PLUG. Compact 4-way multi-plug
complete with mains plug and 4 extension
plugs. Good value at £9.50 + £1 p&p.

Ticket machine

Nick Godwin presents a program for issuing computerised tickets.

One practical use to which the ZX81 with printer attached can be put may be of interest to organisers of local events. This is the computerised ticket machine.

The program listed here is for a very simple general purpose ticket, and illustrates the principle. More complex and versatile programs can fairly easily be adapted from it to suit individual needs (for example, the inclusion of a half-price facility for children, etc).

The first part of the program sets up the ticket. Enter the number of lines of text required in the main body of the ticket. Each line is centred when the ticket is printed, so all it needs is for each line of text to be entered, one by one.

Next, the computer asks for **DATE?** which should be entered as you want it displayed. Alternatively, if the date is not applicable to the particular event, enter **newline**. The same applies to **TIME?**

Finally, enter the price, in pounds. If the amount is less than one, then the ticket will display the price in pence (eg, for the "Community Promotions" example, I entered 1.25, and for the "Borders Computer Group" I entered 0.25; both events are entirely imaginary, by the way).

After this, the computer displays the cue: "OK?", and you should check the display on the screen to make sure all is as you want it to appear on the tickets. If not, press "N" and *Run* again, otherwise any other key is interpreted as Yes. From then on every key depression will *L*print a ticket. The tickets are numbered (if you want to start at 100, change line 410).

Stop the program by pressing *Break*. *Print T* will then display the total value of tickets sold, so you can check the till. *Print N* displays the last ticket number.

DEATH'S HEAD HOLE

You'll almost believe it's true!

Courage, skill, and split-second decisions will see you through, as your newly-formed rescue team battles to save three frightened potholers, trapped in the blackness of Death's Head Hole.

There are hours of nail-biting excitement in this new brand of adventure for the Dragon 32 and BBC Model B, written with the help of cave rescue experts. After this, other adventures will just be games.

Only £5.45 by return of post from:

All programs available with manufacturers full permission.

Send a cheque or postal order for £5 to **Software Lending Library**, PO Box 3, Castleford, West Yorks stating name, address, and computer type.

AT LAST! BY POPULAR DEMAND

ONLY
£5.50
inc p&p.

It's been in the PCW top ten for weeks. Now everyone has the opportunity of owning this fantastic new piece of video action software for the 16K ZX81. Make no mistake, you won't have to use your imagination on this one! It's the most faithful simulation of the arcade game SCRAMBLE available. It contains all the phases and adversaries of the real thing. And rockets do not look like alphabetic characters!

Beware Imitations!

Available from Buffer Micro, Streatham; Microware, Leicester; Micro Marketing, selected Spectrum dealers and by post from:

Colourmatic Computing
Longfellow Road,
Coventry, CV2 5HB

Stop Press! Colourmatic is ready for the Microdrive! Coming soon, Microdrive based Dungeon Adventure. Real time hi-res graphics, talk to your adversaries, run away a lot from unspeakably nasty monsters. A surprise guaranteed in every room you enter. (Pleasant surprises not guaranteed!) 100K of sheer terror.

Also coming soon, Spectrum FORTH and lots more arcade action!

Programmers!

We offer only the very best in royalties for the very best in real time software. Send us a sample of your work. ZX81, Spectrum, Oric, Lynx, BBC, Atom, etc.

Whirligigs and whorls

John Dunford presents three simple routines to mimic the effects of a spirograph.

Most people will be familiar with the famous Spirograph and the patterns that can be formed with it. This program follows exactly the same principle.

Program one produces a simple example of how the Spirograph technique is used. You can experiment by changing the number in line 30. Each number will result in a slightly different pattern.

Program two, and its variants, go one step further to produce a more complicated pattern. By changing line 10 in program two, to give different boundaries and steps, other interesting patterns can be formed. Try this for example:

```
10 FOR n=1 TO 9 STEP 2
```

Now type in:

```
■ FOR n=1 TO 9 STEP 2
20 LET a=n*PI
30 READ Z:INK Z
170 NEXT n
180 DATA 5,3,4,2,1
```

The program has been laid out so that the individual drawing steps can be clearly identified.

For something completely different, type ■ program three and run. Now change line 80 to read:

```
■ FOR n=187 TO 0 STEP -15
```

The ZX Spectrum being used at Sutton Primary School, Cambridgeshire.

Program Two

This is the basic program

Program Three

Program One

```
30 LET a=n*PI
40 PLOT a,0,0
50 DRAW a,0,0,-120,a
60 DRAW a,0,0,-120,a
70 DRAW a,0,0,-120,a
80 DRAW a,0,0,-120,a
90 DRAW a,0,0,-120,a
100 DRAW a,0,0,-120,a
110 DRAW a,0,0,-120,a
120 DRAW a,0,0,-120,a
130 DRAW a,0,0,-120,a
140 DRAW a,0,0,-120,a
150 DRAW a,0,0,-120,a
160 DRAW a,0,0,-120,a
```

```
10 FOR n=0 TO 174
20 PLOT n,0: PLOT n,175
30 NEXT n
40 FOR n=0 TO 174
50 PLOT 0,n: PLOT 175,n
60 NEXT n
70 LET a=0
80 FOR n=187 TO 0 STEP -5
90 LET a=a+5
100 PLOT 0,n: DRAW a,-n
110 DRAW n,a
120 DRAW -a,n
130 DRAW -n,-a
140 NEXT n
```

...and this is the more complicated pattern.

This is with line 80 changed

```
10 FOR n=68 TO 170 STEP 15
20 READ Z: INK Z
30 PLOT n,40
40 DRAW 30,67,-PI/3
50 DRAW 4,7,-PI/3
60 DRAW -100,0,-PI/3
70 DRAW 4,7,-PI/3
80 DRAW 30,67,-PI/3
90 DRAW 3,0,-PI/3
100 NEXT n
110 DATA 1,2,3,4,4,3,2,1
```

Dictionary

MODULE 3: Lines 2000-2210

The purpose of this module is to display the dictionary of characters page by page and to move a cursor around the page allowing the user to specify characters for a number of simple operations.

Commentary

2060 The fairly involved figures which are to be included in the string to be Drawn simply specify that each character to be drawn will be placed 32 pixels to the right of the last, or at the start of the screen and 45 pixels down if the end of a line has been reached. This allows for the full 32x32 grid on which the character was designed plus room for a moving cursor.

2080 While the variable S records the absolute position of the character currently pointed to within the dictionary, S1 is used to indicate the position of the cursor on the screen.

2100-2130 A flashing cursor routine which uses the value of the loop variable I to set the colour with which the cursor is Drawn and thus needs only the one line to Draw and reDraw to invisibility.

2150 The cursor move line, based on the left and right arrowed keys.

2160 Input of "D" will result in the deletion of the character to which the cursor is pointing from the dictionary.

2170 Input of "C" adds the character to which the cursor is pointing to the current character set.

2180-2190 The up and down arrows are used to move to the previous or following page of the dictionary.

2200 Input of "Q" returns program execution to the menu.

Testing

Since no characters have yet been loaded from tape, it is difficult to test this module but since there are almost bound to be errors in entering it we shall adopt the temporary expedient of entering some simple specimen characters with the following line:

```
8888 LET D$ = "BM + 1, + 0;R0;";FOR H
= 1 TO 7:LET E$ = "":FOR I = 0 TO
13:LET E$ = E$ + D$:LET DI$(H + 14 + I)
= E$:NEXT I:NEXT H:LET DI = 110
```

This line, provided that the program has been initialised, can be called in direct mode or even called as a subroutine from the initialisation module and will load the dictionary with 112 characters which are actually sets of 14 lines of increasing length traversing the 32x32 pixel space diagonally from the top left corner.

Having run line 8888, calling up this module should display the first page of the dictionary and allow the full range of functions specified in the commentary.

MODULE 4: Lines 2500-2590

Having begun to build up a character set

from the main dictionary, this module allows the user to display the current state of the character set.

Commentary

2580 Input of "D" while the character set is being displayed will result in the character set being deleted. Note that this is

achieved simply by setting CI to zero — there is no need to physically wipe out the character set. Pressing any key other than "D" will return to the menu.

Testing

You should now be able to create a character set from the main dictionary and display that character set.

EASIREADER

The Greatest Programming Aid Since Fingers
Cut down program entry time
Minimise bugs ■ Minimising Entry Errors
The EASIREADER is an attractive high-quality acrylic plastic stand designed to aid the manual entry of programs from magazine listings, price lists and book orders.
99 percent of bugs in programs caused from garbled listings are the result of entry errors. The EASIREADER holds the copy at a comfortable angle, avoiding strain, and a specially-designed cursor runs down the program to prevent slipping between complex and similar-looking lines.
It effectively keeps a finger on your current line, especially useful for two-handed keyboard entries and for use with Sinclair computers.
Available now only from BUGBEAR (Patent Pending No. 2232718) at an introductory price of £12.99 (plus £1.25 p.p.)
Send cheque/PO or SAE for further details to: BUGBEAR, Dept. W, Nicholson Buildings, Templeton, South Shields, Tyne and Wear, NE33 5RZ.

The Working Spectrum

(228 page book)
The first well-documented collection of serious programs for the ZX Spectrum. Programs include a Basic Renumber which can handle Gotos and Gosubs, a character dictionary, a file-handler, several utility programs and a few games. Each program is built up out of re-usable subroutines.

£5.95*

The Working Dragon 32

This is a companion volume to The Working Spectrum and includes several new features such as a Text Editor and Music Composer and Editor. Other programs help you use the Dragon 32 as an accountant, for more advanced high resolution graphics, as a home tutor for education and for playing games. Each of the programs and subroutines is explained line by line to help develop your own programming skills.

£5.95

Best of Popular Computing Weekly

Cassette
Four of the top Spectrum and ZX81 games from Popular Computing Weekly are recorded on this one cassette. The games are Laserchase for the 16K & 48K Spectrum, Kong's Revenge for the 16K & 48K Spectrum, Robot Control for the 16K ZX81 and Alien Attack, a Space Invaders type game for the 1K ZX81.

£4.45

Cruising (on Broadway)

Cassette
Behind the wheel of your machine. Cruising on Broadway — learning up the strip. You look mean. People stop to stare. Suddenly a black-and-white pulls on to the Broadway behind — its light flashing and siren wailing. The chase is on! Cruising on Broadway is a tyre-burningly fast machine-code game for the 16K & 48K Spectrum. The further you can get the more difficult it becomes — cash prizes in Popular Computing Weekly for the highest scores.

Chip Link Software

NEW 16K ZX81 GAMES

FOREST OF DEATH

£6.95

Although a complete program in its own right, FOREST OF DEATH is the first in a series of interconnecting adventure games. FOREST OF DEATH has three exits to future programs (available soon). Take your hard-earned secrets and experience of FOREST (also BARKEN LAKE, DASH VALLEY and LAURELTON) via the secret exits.

NEELUNG

£5.95

Avoid dragons, swamps, quiches, maddening death etc. At the hands of Trella, Orgas, Goblins and Gollins while you rescue your village from the Dragons.

HANNO

£3.95

Collect treasure, escape death and kill the Dragon in this cunning game. Goblins, Hargo and Giant Spiders are amongst the creatures you will meet in this exciting new text adventure.

Special offer - 21 off if more than one program purchased.
Prices are inclusive of post etc.

AMAZING NEW PRODUCT TELESOUND 84 BBC/SPECTRUM SOUND BOOSTER

Telesound 84 outputs the computer sound direct through your unmodified TV set. Sound effects then can be controlled from a whisper to a roar. Three easy snap-on connections eliminate soldering.

Telesound 84 measures 2½ x 2 x 1½ cm. and requires no separate power supply. This unique device (patent pending) uses some of the very latest ultra miniature components and costs only **£9.95** inclusive of post, packing, etc.

Full instructions with connection diagrams are supplied so that the unit can be fitted in minutes without any previous experience.

PROBLEM MAY BE IN OVERHEATING

D Holmes of Old Lane, Gollcar, Huddersfield, West Yorkshire writes:

Q I have a Sinclair Spectrum and two major problems. The first is that I cannot get colour on my Hitachi television, and even when I do get it on another television, it is usually slightly blurred. Is it the television, or the PAL unit that is wrong?

Secondly, when using my television on a black and white set, after about twenty lines the display goes from a dark grey background to a light grey background, and is sometimes hardly legible. Can you help me with these two problems please?

A There have been problems with the Spectrum colour display. Some televisions sold on the British market are slightly out of phase. This does not matter with a normal television reception, but a computer is more fussy. On the first issue, of Spectrum PCBs, there is a small hole in the bottom that gives access to a tiny screw. Careful adjusting of this with a non metallic object should improve the situation. On the second issue, of PCBs, there is no external access, which means taking the top off your Spectrum. The screw is slightly left of centre.

In your case, however, I think that the problem is something else, because of the second point you raise. This is more akin to problems that develop because of overheating. Do you find that your program corrupts after your computer has been left on for a while? Either this or it simply heats itself from time to time. If either of these things happens then you will have to return your Spectrum.

YES, AND HERE IS ITS ADDRESS

David Cox of Huntigfield, Egham, Surrey, writes:

Q I have seen a company called Ground Attack, which had a Ram pack reviewed for the ZX81. I cannot find an address for Ground Attack. Can you help?

A Yes, here it is. Ground Attack. Alfreda Avenue, Hullbridge, ESSEX.

If you write to them I am sure they will be happy to send you details of what you want.

MEMORY IS SPLIT INTO AREAS

Paul Chisholm of West Bromwich, Birmingham, writes:

Q Can you explain memory mapping to me? I have seen it mentioned several times in computer magazines, and know it is to do with what a computer stores in its addresses. But I do not know whether the memory map for a Vic20 with 16K is the same as say a Spectrum with 16K, or does the Spectrum have the same memory map as a 48K Spectrum?

A A memory map is the order in which the computer stores all the things that go to make up its memory. With most home computers, including the Vic and the Spectrum, this is an area of 65,535 addresses (64K). More addresses can be added, but they could not all be used at once. The memory is divided into areas, some for use by the Rom and the rest by the Ram.

A Z80 chip, as on the Spectrum, will always take up the first 16K of space, even if it is not all used (the ZX81 uses only 8K of Rom). The Vic and similar 6502-based computers use the very top 16K of memory.

Even if a computer can potentially use 64K, only some of that may be taken up. Thus an unexpanded Spectrum will use 16K of space for Rom, and 16K of the space for Ram, and the rest is unused. All computers use some of the Ram for the screen and the systems variables. This is 1.5K on a Vic, and about 7K on a Spectrum. So a 16K Spectrum will

have 9K user Ram available, and a 48K, 41K user Ram.

Each area, Rom, systems variable and user Ram takes up a specific part of the memory. Things such as a calculator stack, Gosub stack and variables also have an allocated position. These are always stored in the same order, but the actual addresses that they occupy will change as the program gets larger. The order of these in the Spectrum is given on page 165. It is a pity that not all manuals give a memory map to help the user.

A computer will always have its own unique memory map. The main changes are usually to do with how far into the possible Ram memory the on-board Ram extends.

EASY GOING FOR FASTER GAMES

Jane Spencer of Highfields, Durham, writes:

Q I have a BBC Model B and am learning quite well. However, I have tried to write some games programs but would like them to be faster. Is there a compiler available for the BBC B and if so, how much is it and where can I get it?

A Yes, there is a compiler written by Jeremy Ruston. It comes complete with a listing as well as a cassette. It is available from Interface, 44-46 Earls Court Road, London W8 6EJ for £34.95.

NO INDEPENDENT LITERATURE

D Holyoake of Upper Elmers End Road, Beckenham, Kent, writes:

Q Could you please tell me whether there is a manual or any literature available for the Research Machines 380Z, as these are the computers used in my O-level studies course.

A I have not been able to find any independent literature on the 380Z. Neither Foyles nor Georges had any-

thing that I could find. It must be pointed out that as the 380 is used solely as an education machine, so it does not have the normal back-up associated with machines commonly found in the home market sector.

The only thing you can do is get in touch with Research Machines yourself and ask them. They do a range of manuals which they can supply you with, for between £3 and £6. All you need to do is contact their sales department and tell them what you want. You will probably find them quite hard going, as they are written for teachers who already have a good knowledge of computing, and are not 'user friendly'. Research Machines is at P.O. Box 75, Mill Street, Oxford (phone 0865 249791).

WHETHER OR NOT TO BUY

Thomas Van Dahl of Park Lane Rise, North London, writes:

Q I have a Vic20 and I am quite happy with it. I am considering buying a light pen for it, but I am not sure how it works or if one is worth buying. I have not seen many programs for them.

A A light pen works by using a photo-resistor. This has an emitter and a collector. A window in the photo-transistor collects the light as it passes between the emitter and collector. This changes the resistance. A high value will be returned for a dark or black area, and a low value will be returned for a white or light colour. This is how a bar code is read. The duration of the value returned will, of course, give you the thickness of the line.

Whether or not you should buy one is up to you. I think that at the moment you might find it better to wait until more programs are available. On the other hand you might regard it as a challenge to write your own.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem **Peek it to Ian Beardsmore** and every week he will **Poke** back as many answers as he can. The address is **Peek & Poke, PCW, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.**

Ziggurat

Falling off a log

Working out the extent to which a population growing at a rate of 1.495 will have grown after a certain number of years, using a computer, is not difficult. It is, however, a waste.

As I have noted, the growth of population at a constant rate is called *exponential growth*. This means that although the *rate* of increase is the same, the actual *absolute* differences are ever increasing. For example, at a constant rate of inflation of 10 percent (a rate of growth of 1.10), in one year £100 will have become £110 (an absolute difference of £10). And in two years the amount will be £121 (a further increase of £11).

The less wasteful way of dealing with such growth takes a hint from the term "exponential" and uses logarithms. Different computers use different ways of expressing logarithms, some call them Log, others Ln, and there are other variants. In instant mode (or in a program) enter: $X = \text{LOG}(1.495)$; $Z = 19 \times X$; $T = \text{EXP}(Z)$; PRINT T

to which the output from the Print is 2080.57. If you check this against the result of successive multiplications of 1.495, then you will find that the two numbers are in agreement.

Try entering: $X = \text{LOG}(5)$; $Y = \text{LOG}(6)$; $Z = X + Y$; $T = \text{EXP}(Z)$ and then investigate the values of X, Y, Z and T, by use of Print. X is 1.6094, Y is 1.7918, Z is 3.4012 and T is 30.0000. What we have is the multiplication of the numbers 5 and 6 by use of logarithms (Exp corresponds to what is called the antilogarithm in school mathematics).

If you enter Print T-30 (on the computer I am

using) the answer is $-2.9802E-8$, so that T must actually be about 29.99999997. As my machine only prints out 9 significant digits (and the value 29.99999997 has 10 digits) it rounds to 30.

To use logarithms, therefore, is to incorporate some slight inaccuracy, but the advantage of the method is that it is shorter.

The slight inaccuracy in the logarithm function (and there has to be an inaccuracy in some cases) is reflected in another provided function in most versions of Basic.

The function is the "power" function usually written as $**$ or \uparrow , where, if N is the number and P is the power, $N**P$ is the equivalent of N^P , or $N \times N \times \dots \times N$ where there are P terms in the expansion.

If we enter: $A = 2 \times X$; $B = \text{EXP}(A)$; PRINT B then we find that B is 25, that is, 5×5 . In the above line X is the number, and 2 is the power. When the Basic translator in the computer meets $N**P$ it works out $\text{EXP}(P \times \text{LOG}(N))$ — which is why P may not turn out to be a whole number. (What is N times N, 2.5 times?)

To investigate the degree of inaccuracy in calculating powers try something like:

1000 FOR I=1 TO 30: PRINT (I**2)-I**2: NEXT I and you will find that sometimes it is exact and sometimes it is not. This inexactitude comes about in two ways — the conversion to the logarithm is not exact and numbers are not usually held exactly by the computer.

You may have heard that certain microcomputers have 9 to 10 digit accuracy, and that others have an accuracy of about 7 digits (most calculators seem to have 8 to 10 digits accuracy). How is it possible to work this out? If a computer stores the number part (rather than the relative size/exponent part) in 32 bits (ZX81, Pet, Apple II, etc) then the largest whole number it can store is about 2^{32} . We have to find what that number is, and then how many digits there are in that number.

The number is given by $\text{EXP}(32 \times \text{LOG}(2))$. To find how many digits that is, we calculate $32 \times \text{LOG}(2) / \text{LOG}(10)$ which is 9.636.

Boris Allan

Puzzle

Pricing the blues

Puzzle No. 43

Once, in his early years, Picasso popped down to his local art supplies emporium to replenish his stock of painting materials. He was particularly short of blue paint. Crayons were 50F, brushes were 700F and the tubes of blue paint were 300F.

He returned with 100 items, having spent 10,000F. If he bought at least one brush, crayon and tube of paint, how many of each did he buy?

Solution to Puzzle No 38

The lowest palindromic perfect square with an even number of digits is: 698896 (836^2).

The program generates successive squares and the sub-routine checks to see if the square is palindromic. Lines 10, 20, 100, and 110 ensure that only squares with an even number of digits are considered.

```
10 LET L = 10
20 LET U = 10
30 FOR N = INT (SQR L) + 1 TO U - 1
40 LET S = N*N
50 LET SS = STR$ S
60 GOSUB 200
70 IF T <> 0 THEN GOTO 90
80 PRINT N,S
90 STOP
100 NEXT N
110 LET U = U+10
120 GOTO 30
```

```
200 Rem palindromic check
210 LET T = 0
220 FOR P = 1 TO LEN SS/2
230 IF SS(P) <> SS(LEN SS - P + 1) THEN LET T = T + 1
240 NEXT P
250 RETURN
```

Winner of Puzzle No 38

The winner is: P M Devereux, Worley Road, St Albans, Herts, who receives £10.
